Build in 1975 - refit 2016, Solé 60 PS

125L Diesel, 250L Water

In Astronomy the star Borealis is used together with the Australis. The Aurora Borealis is the Northern Light, the Australis the Southern Light. The Tania Australis is a star in the constellation of the Ursa Manor. The Tania Borealis is the double star of the Tania Australis.

Our Borealis is a Valkkruiser Sport 850. Most people know this typical Dutch brand from the bigger ships as our Geminus. This model is quite unknown and therefore exotic. The Valkkruiser Sport 850 is a ship with several benefits. Its convertible roof means you can enjoy your sailing holiday outside in the warm sun and cool breeze. One of the best experiences you can have. Because of its low headroom even fixed bridge heights of 2.50 m. will not present a problem. The Borealis allows you to find some of the best and quietest moorings where you can spend the evening watching the sunset with your loved ones.

By booking this ship without any experience, the Skippertraining is obligatory.
